Side Mount Box – CryptoTap Plus
Part #399-85 TAP

CryptoTap unit and button sold separately

Don't have enough room on your bay meter faceplate to mount your CryptoTap Plus? This bi-directional design enables mounting on either the left or right side of your bay meter/vacuum or any surface near your equipment.

Two sets of fasteners for the box itself are included, you can use either the Torx head or the one way round head (tamper proof) style depending on your preference.   The box comes with 2 Torx head installed, top and bottom.

Components:

- Side mount box – made up of a base and a cover with lock (2 keys)
- 6 ea. Torx T-20 drive fasteners (2 are holding the box together)
- 6 ea. One Way (tamper proof) fasteners

The picture below is an arrangement that would be used for a right side mount. Separate the side mount box base from the cover, install the CryptoTap unit with its 2 screws, mount the base to the meter wall using any of the 4 – ¼" holes. Route wires through the openings, install the cover by using the lock and 6 screws from the 2 sets of supplied screws (your choice).
