Glory MiniMech™ Bill Dispenser

NEW ROBUST BILL DISPENSER FOR MORE RELIABLE BILL DISPENSE

The Standard Change-Makers' Bill Exchanger Series has added the new GLORY single and dual note bill dispensers to its line of change machines with bill dispensing capabilities. The products with Glory bill dispensers will be designated with a "-G" suffix in the product model number.

The Glory MiniMech™ is a single note dispenser that is specifically designed for non-banking applications. It features short bill travel distance and the bills are dispensed horizontally (long end down). New and used bills are easily loaded into the note tray that helps keep the edges aligned; and the reject area is in the same tray. The MiniMech will hold up to 1,000 bills of a single denomination.

The Glory MultiMech™ is a dual note dispenser featuring two note cassettes. It can dispense two different denominations or the same denomination with additional capacity compared to other dispensers. The upper cassette holds up to 1,300 bills and the lower cassette will hold up to 1,700 bills - providing a total capacity of up to 3,000 bills.

- ▶ Galvanized Steel Housing
- ▶ Low Maintenance Requirements - Cleaning Only!
- ▶ Glory's *IDD™ - Intelligent Double Detection* Feature - maximizes pay-out accuracy with no adjustments or intervention
- ▶ Includes **EF+ Module** - with Remote Notification
- ▶ One-Year Limited Warranty on the Glory Bill Dispenser
- ▶ Two-Year Limited Warranty on the rest of the machine

The Bill Exchangers with Glory Bill Dispensers will also include the EF+ Module as standard equipment. This will allow owners to connect the machine to their internet network via an Ethernet cable and send text and email alerts of out of service and low level conditions.

The Glory Series Bill Exchangers will also have the optional **Patron Display with Attendant Keyswitch**. Pictured on both machines above, the Patron Display is a large LCD display that shows the user the denomination accepted and the number of bills dispensed. The Attendant Keyswitch allows employees to insert the key and when turned the display will show the last 10 transactions - denomination accepted, bills dispensed with time & date stamp. The employee will never need access to the inside of the machine to retrieve that information from the audit report.

BX-FRONT LOAD-GLORY: 29"H x 14.75"W x 21.50"D
