

EF+ MODULE

WITH REMOTE REPORTING FEATURES

GET REAL-TIME REMOTE NOTIFICATIONS FROM YOUR CHANGE MACHINE

The EF+ Module is the next generation of expanded function control in Standard Change-Makers' Modular Series change machines. The EF+ Module can send text and email notifications to mobile phones, tablets and computers while connected to an internet network router.

Now, owners can see the previous day's revenue activity by checking the daily audit report sent to their computer. Or get an "Out of Service" alert when a bill jam occurs, or a text when a hopper's coin capacity reaches a pre-set level.

The email/text function requires an Ethernet connection from the EF+ Module to your internet network router. It's much more reliable than WiFi or Bluetooth devices. You can program up to six cell phone numbers or email addresses. You can program the alerts and reports you wish to receive - as well as, how often you want to receive them.

Audit Reports and Diagnostic Error Reports can be sent daily or weekly.

Alerts and Alarms are sent in real-time! You'll probably know before your attendants!

**FIELD RETROFITABLE!!!
COMPATIBLE WITH ALL MC SERIES
CHANGE MACHINES, AND OUR
BX/BX SERIES EXCHANGERS!**
